Medi-Dose, Inc. / EPS, Inc. Announces Latest Enhancements to MILT 4 Software

Ivyland PA – August 2017 – Customers using MILT 4, Medi-Dose’s industry leading unit dose labeling software, can now install the latest free update. Update 4014 includes the following enhancements and improvements:

- **Error-Prone Formatting Check:** Similar to the popular Tall Man Lettering Feature introduced last year, MILT compares entered text against most of the *ISMP List of Error-Prone Abbreviations, Symbols, and Dose Designations* and suggests changes to reduce the likelihood of your intended meaning being misread or misunderstood.
- **Reporting Enhancements:** In addition to a new Summary Style report, packaging log data can now be grouped by up to three fields, totaled by doses printed for those groups, filtered by any field, verified against log data tampering, and even made to include a link to an archived PDF copy of the original label.
- **Date Enhancements:** MILT can now round calculated dates to the first or last day of the month. It can also enforce the requirement that Beyond Use Dates not exceed ½ of remaining time until the Manufacturer’s Expiration Date.
- **Pump Feature:** Customers using MILT to print unique bar code labels to identify smart pump channels for automatic programming can use the new Pump Feature to manage the process of creating, printing and verifying these bar codes.

“We’re always working to improve the medication packaging experience for pharmacists while helping to reduce errors”, says Robert Braverman, President of Medi-Dose. “These new features demonstrate our commitment to helping you maximize the efficiency of your practice, and to helping you protect the safety of your patients and practitioners.”
